Software for pastry shops

Modern IT systems to support your bakery! Thanks to a unique set of IT solutions prepared especially for the most up-to-date needs of the bakery industry, your business will start functioning at top speed. Sales forecasting, verification and access to stock records, available in the InfoPiek Sales software, are only a small part of what we have prepared for you. Let us introduce our latest software for patisseries and other bakery industries!

Unique set of functionalities

Touch Moon is software for bakeries and pastry shops, allowing you to verify the weight of your bakery products in a modern way - regardless of whether they are ordered in trays, packs or cubes. In addition, our system enables you to modify your delivery documents in real time - which will significantly improve your production.

Thanks to a unique set of functionalities, you will be able to monitor the exact parameters of your order at any time and modify the related documents according to your needs. This way of administering the delivery process will streamline the logistical operations of your bakery and allow you to devote more attention to the matters that are most relevant to the manufacturer.

Our unique program will let you save time on delivery formalities while ensuring that you are always in full control of your delivery process.
